Vaporox Skilled Nursing Case Study

Stage 3 Pressure Ulcer on Left Buttock Healed in 9 Weeks with Vaporox

Patient Information

Age: 46 yo | Baseline: 10/3/25

Wound Type: Neuropathic Stage 3 Pressure Ulcer

Comorbidities: Anxiety, Depression, Neuropathy, Poor Circulation

INTAKE
10/3/25

MIDWAY
11/7/25

FINAL
12/2/25

Clinical Summary

Over an approximately 9-week treatment period, the Stage 3 neuropathic pressure ulcer demonstrated consistent and measurable healing progression with Vaporox. **The wound reduced from an initial size of 3.5 × 3.5 × 1.5 cm to closure following 22 treatments.**

Patient Outcome

The patient experienced progressive pain relief and improved comfort throughout the treatment course, with restoration of mobility as healing progressed. Upon wound closure, the patient was able to return home with the wound fully closed.
